Education

Bachelor of Software Engineering, Game Programming.

Media Design School

Player-focused software engineering student with experience building game systems, tools, and web services across team and client projects. Strong foundation in data structures, algorithms, and C++, with hands-on experience in Godot, Unity, and Unreal. Focused on developing scalable features and tools that improve player experience.

Programming Languages: C++, C#, Python.

Engines: Unity, Unreal, Godot.

Courses: Data Structures & Algorithms, Graphics, Networking, AI, Game Engines.

Projects

The Frog Prince (Game Jam Winner: 1st for Controls)

[View project](#)

- Designed and implemented core gameplay systems in Godot (enemy waves, upgrade logic, player controller) using modular scripts, with emphasis on responsive movement and combat feel.
- Collaborated in a compressed game jam cycle, iterating from playtesting and balancing feedback; control polish contributed to **1st place** (Controls) and 4th overall.

Sneaky Sox (Puzzle platformer)

[View project](#)

- Implemented and tuned player movement (wall jump, slide, core locomotion) with solid collision handling for responsive platforming; built puzzle interactions including laser redirection, environmental triggers, and stealth/hiding.
- Authored levels for a **10-level** campaign with stars/collectibles; collaborated with programmers and artists on lighting and readability, using playtests to improve clarity, pacing, and atmosphere.

Fairy Forest (Soul like)

[View project](#)

- Implemented melee combat for a Souls-like prototype in Unity, focusing on light and dash attacks, hit windows, and clean state handling so movement and attacks transition smoothly.
- Implemented 8-directional locomotion in Unity, integrated with animation in collaboration with artists., and built a lock-on system so the camera and combat stay oriented on enemies during fights.

Experience

Human Digital – Auckland/Sydney

Aug 2023 – Mar 2024

Junior Developer

- Developed and maintained production web features for **10+** client sites using Webflow/Shopify/WordPress, improving stability and user experience.
- Innovated the Human Digital website, implementing modern design trends and features that enhanced the company's digital presence and increased client engagement by **180%**.
- Resolved technical issues and provided comprehensive bug fixes for client websites, resulting in improved website performance and reduced downtime with a **98%** rating.

Webzilla – Auckland

Sep 2021 – Dec 2022

Software Engineer Intern

- Collaborated with a team of developers to design and develop custom websites using HTML/CSS, PHP, and WordPress for over **10** clients, resulting in a **90%** satisfaction rate.
- Conducted regular updates and maintenance on client websites to ensure optimal performance, resulting in **99.9%** uptime and reducing customer complaints by **50%**.
- Led efforts to incorporate new technologies and implement innovative solutions into future projects as part of a cross-functional product development team, improving overall user experience by **25%**.
